PTK receptors are useful in CC providing immunological probes for differential identification of the Ct tissues or cell types present in a biological sample. PTK is used in methods for the diagnosis, prevention and treatment of various disorders (related to PTK such as immune system disorders (severe combined immunodeficiency (SCID), inflammation), hyperproliferative disorders (neoplasm, sarcoidosis); cardiovascular disorders (arrhythmia, cardiovascular disorders (multiple sclerosis), central nervous system disorders (multiple sclerosis), contral nervous system disorders (multiple sclerosis), concurodegenerative disorders (Alzheimer's disease, Parkinson's disease); blood coagulation disorders (thrombocytopaenia); autoimmune disorders (biliary cirrhosis, Crohn's disease); respiratory disorders (asthma, callergy); gastrointestinal disorders (inflammatory bowel disease); concretions (phenylketonuria); cancers (such as ovarian, lung, bladder, cliver, breast and lymphomas); behavioural disorders (Tourette's syndrome); musculo-skeletal disorders (arthritis, trauma, tendonitis); renal disorders (nephrotic syndrome, glomerulonephritis); metastases of confections caused by bacteria, viruses, fungi and parasites. PTK is also useful for screening therapeutic compounds. PTK is used as an antigen in cardia are useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-OCT-1999;

The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG65326-ABG65518 represent albumin

An isolated nucleic acid molecule (I) comprising a polynucleotide

which

```
cc amount of the new protein in a sample or by determining the presence of comutations in the new genes. Specific uses are described for each of the claim genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of commune or autoimmune diseases e.g. AIDS (acquired immune deficiency comparison), asthma, anaemia and rheumatoid arthritis, breast neoplasia cand breast cancer, neurological diseases e.g. Alzheimer's disease, and breast cancer, huntington's disease, Tourette syndrome, companies, demyelinating disease, peripheral neuropathies, neoplasia, crauma, congenital malformations, spinal cord injuries, toxic trauma, congenital malformations, spinal cord injuries, multiple clerosis, ischaemia and infarction, haemorrhages, schizophrenia, mania, congenital, depression, panic disorder, learning disabilities, ALS, caltered behaviours e.g. disorders in feeding, sleep patterns, balance and perception, encephalitis, disorders in feeding, sleep patterns, balance and perception, encephalitis, disorders in behavioural disorders and hyperproliferative disorder. AAE21236-AAE21236 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the

                          therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and disgnosing disorders such as cancer, reproductive disorders, disease, ulcerative colitis), immune disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis). ABG63326-ABG65518 represent albumin fusion proteins of the invention.
                                                                                                                                                                                                                               The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum

HS;

N-PSDB; 2002-304113/34. DB; AAD33695.

An isolated nucleic acid molecule (I) comprising a polynucleotide which encodes a polypeptide useful in the diagnosis and treatment of disorders e.g. immune disorders -

Claim 11; Page 472-474; 534pp; English

CC AADJ33692-AADJ3736 represent cDNAs corresponding to 21 human secreted CC protein genes, and AAEZ1191-AAEZ1235 represent the proteins they encode. AAEZ1236-AAEZ1280 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, CC treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the CC amount of the new protein in a sample or by determining the presence of CC indictions in the new genes. Specific uses are described for each of the CC 19 genes, based on the tissues in which they are most highly expressed, CC indictions of the CC immune or autoimmune diseases e.g. AIDS (acquired immune deficiency CC syndrome), asthma, anaemia and rheumatoid arthritis, breast neoplasia CC and breast cancer, neurological diseases. Tourette syndrome, CC trauma, congenital malformations, spinal cord injuries, toxic celerosis, ischaemia and infarction, haemorrhages, schizophrenia, mania, CC celerosis, ischaemia and infarction, haemorrhages, schizophrenia, mania, CC dementia, depression, panic disorders in feeding, sleep patterns, balance and perception, encephalitis, disorders in cardiovascular, neural/CC sensory, reproductive and digestive systems, behavioural disorders and constants a human constants and infarctive and secuence represents a human constants. hyperproliferative disorder . secreted protein of the inver rder. The present sequence invention.
